

Nguyen Trong Luat(チョーライ病院 循環器内科医 / 2017年8月13日～26日)

Improving knowledge and take care patients better are very important for a doctor. Cooperation among Cho Ray hospital and university of Tsukuba hospital help me to have an opportunity to perform that.

Firstly, detail guides of professor Minoru Akiyama helped me a lot when this was the first time I came to Japan. Everything seemed trangely to become easier for me. I would like to express my sincere thanks.

Secondly, my first impression was the professional consultation of doctors in cardiology department with total relative information of the patients was showed very fast although doctors spoke Japanese. I was very surprised when I came to HCU, ICU because of modern equipments and individual section for every patient. It was very different with my hospital which always overload and no space for the patients.

Thirdly, professional attitude of all medical staff at Tsukuba university hospital toward served patients helped me to learn a lot. In addition, I learnt a lot of things such as: advanced technology in cardiology, education and training activities in each department, cooperation among the deapartments, the teamwork of medical professionals.

In reality, the many enthusiastic and dedicated teachers of cardiology department supported me to improve my knowledge, open my mind, and increase my vision. I really appreciate that, and thanks to doctor Masayoshi Yamamoto for everything. I would not forget to thank Professor Kazutaka Aonuma, Professor Akihiko Nogami, Dr Ishizu, Dr Ahmed Talib, Dr Hiraya and other doctors and staffs at cardiology department.

In conclusion, although I stayed at Tsukuba university hospital for 2 weeks, I learnt many things about Japan and Japanese culture. I love Japan.
