

Tran Minh Hai (チヨールイ病院 心臓血管外科医 / 2017年11月20日～12月1日)

Dear Prof.

First of all, I want to thank the University of Tsukuba Hospital Leaders and personally Prof. Minoru Akiyama to help us to come here for training in 2 weeks.

Before, i've already studied in Paris and Minneapolis but this time give me alot of impressive things.

Your country is very clean and calm. The atmosphere is pure, too. The university is covered by the green forest but now yellow.

In hospital, it is not crowded like in Cho Ray hospital because of reasonable arrangement. In the ICU, the morden equipment is used and the nurse take care of the patient very carefully. Every morning, the Prof. Hiramatsu and all of doctors in department always visit the ICU.

When i go to the Operation room, i can't believe that is very incredible that the heart-lung machine has 9 pumps (it's not as usual, 5 pumps like in my country). Everyone can follow the operation via 3 or 4 LCD screens around.

TAVI and EVAR are often done here. Robotic da Vinci is just used for Urology and other but not for cardiac surgery yet.

However, they don't speak English (the international language) any more except some doctors. The documents and books are in Japanesse, too. So that, it cause some difficulty to me to understand clearly about the patient or the technique that i want to know.

Finally, it's a very impressive trip to be here and i study alot from the Cardiac surgery to the Japanesse culture, lifestyle and country.

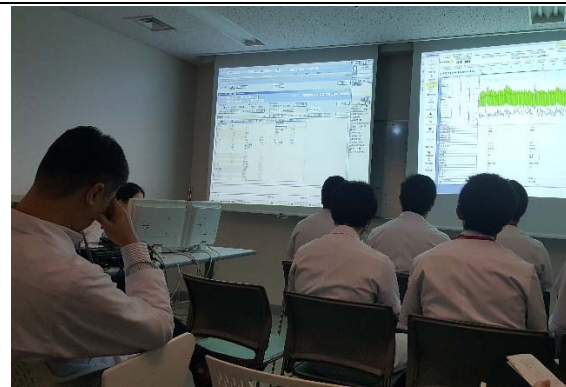

I hope to be here again in near future.
